SAEED KHOURY

Software Engineering Student — Web, Machine Learning, Security & Systems

Kafr Kanna, Israel · saed.khoury10@gmail.com · +972-50-585-4855 · github.com/saeedkhoury · saeedkhoury.github.io/saeedkhoury

Expected graduation: July 2027 · **Availability:** part-time internship, 2–4 days/week, 26+ weeks starting March–May 2027 and continuing beyond, any location in Israel.

SUMMARY

Fourth-year Software Engineering student (GPA 85.1/100) with hands-on experience in machine learning, cyber security, computer networks, and systems programming, and a live client website shipped end to end. Proficient in Python, C, C++, Java, JavaScript, and TypeScript, with strong foundations in data structures, algorithms, operating systems, and compilers. Works AI-assisted, directing AI tools while owning architecture, verification, and testing.

SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, SQL, Assembly, HTML, CSS

Web: Astro, TypeScript, Tailwind CSS, Zod, i18n & RTL layouts, SEO, accessibility, Playwright, GitHub Actions CI/CD

AI & Machine Learning: AI-assisted development, prompt engineering, generative-AI tools; deep learning, computer vision, object detection, dataset curation & labeling (Roboflow), model training in Python

Systems & Networking: Operating systems, computer networks, compilers, computer architecture, IoT, Unix/Linux, Docker

Security: Web application penetration testing (OWASP), SQL injection, SSRF, JWT attacks, DNS cache poisoning, Wireshark, tcpdump, Scapy

Practice: Git/GitHub, SQL databases, software testing & QA, Agile / project management

PROJECTS

Dr. Khalil Kanani — Dental Clinic Website (Live Client Project) **2026**

TypeScript · Astro · Tailwind CSS · Zod · Playwright · GitHub Actions · drkhalilkanani.com

- Built and launched a trilingual website (Hebrew/Arabic RTL, English LTR) for a dental clinic owner, from first client conversation to a live production domain; layout mirrors per language, with localized routes, structured SEO metadata, and Open Graph link previews.
- Added a build-time launch gate that refuses to publish while clinic facts (hours, services, phone, name spellings) are unverified, so wrong information cannot reach patients; designed accessibility and patient privacy into the site from day one.
- Covered by unit and Playwright end-to-end tests and automated SEO, accessibility, and asset audits, deployed through GitHub Actions CI/CD. Built AI-assisted, with architecture, verification, and QA owned by me.

Web Penetration Testing & Local DNS Attack — Network Cyber Security Course **2026**

OWASP Juice Shop · BIND9 · Scapy · Docker · Wireshark

- Exploited a live OWASP Juice Shop across SQL injection, SSRF, unsigned-JWT bypass, and password-reset flaws; documented each with reproduction steps and remediation (24-star target). Course grade: 90/100.
- Built a containerized SEED Labs Local DNS Attack lab (Docker, BIND9 resolvers and authoritative zones) and crafted Scapy packets to poison the DNS cache against a fixed query-source port, verifying each attack in Wireshark/tcpdump.

Corona Home-Test Detection Model — Deep Learning Course **2026**

Python · Roboflow · Computer Vision · Object Detection

- Built and trained an object-detection model (two-person team) that locates home COVID test kits and classifies the displayed result; curated and labeled a custom image dataset in Roboflow. Course grade: 93/100.
- Implemented a Python pipeline that auto-crops irrelevant regions and labels the target device before inference.

Sky Phone — Trilingual Shop & Repair Website **2026**

JavaScript · CSS · HTML

- Built a fully trilingual (Hebrew/Arabic RTL, English LTR) storefront with product catalog, filtering, client-side routing, cart, and chat assistant, on a data-driven, framework-free architecture. Live at saeedkhoury.github.io/SkyPhone.

FixPhone — Phone-Repair Shop Database System **2025**

MySQL · Python (Tkinter)

- Designed a 15-table relational database (customers, devices, technicians, service requests, warranty claims) with stored procedures, and built a Python Tkinter front-end over it. Databases course project.

Wine Management Desktop Application **2024**

Java · JavaFX · MySQL

- Built a JavaFX desktop app over a MySQL database ingesting a ~5,000-row dataset with full CRUD and role-based access control (Manager read/write, Employee read-only) over JDBC.

EDUCATION

B.Sc. Software Engineering — Kinneret Academic College, Israel **2023 – Jul 2027**

GPA: 85.1 / 100 · Selected coursework: Deep Learning (93), IoT (92), Network Cyber Security Project (90), Operating Systems, Computer Networks, Compilers, Computer Architecture, Software Testing & Verification, Human-Computer Interaction, Database Management Systems, Introduction to Project Management.

ADDITIONAL

Languages: Arabic (native), Hebrew (fluent), English (professional working proficiency). · **Hackathon:** KIC (Kinneret Innovation Center) 1st cohort — early agricultural-pest detection challenge.
